HYDERABAD

P R E F A C E

The Statistical Abstract of Andhra Pradesh, 1978 is the 22nd in the series of this annual publication. It presents the data on various aspects of the State economy for the latest year with comparative figures for the preceding years. The district-wise break-up has also been given for most of the items for the latest year. The Comparative Statistics section also has been expanded to include the State-wise statistics on selected socio-economic indicators.

It is hoped that this publication would serve as a useful reference book to the general public, research workers and administrators.

I thank all the concerned Heads of Departments, both of the State and the Central Government, for their kind co-operation in furnishing the requisite data.

P. B. K. MURTHY,
Director.

1. *Chlorophyll a* (Chl *a*) is the primary photosynthetic pigment in most plants and algae. It is a green pigment that absorbs light energy in the blue and red regions of the visible spectrum. Chl *a* is located in the thylakoid membranes of chloroplasts. It plays a central role in the light reactions of photosynthesis, where it captures light energy and converts it into chemical energy in the form of ATP and NADPH. The structure of Chl *a* consists of a central magnesium atom coordinated by four nitrogen atoms in a porphyrin-like ring, with a long phytol side chain attached to one of the ring carbons.
